

HydraTrack is an on-footer drain channel system for interior basement waterproofing.

Its rear angle leaves space for non-removable dirt or debris that rests against the wall. The top of the pipe is sloped downward, which allows for a thicker concrete floor that better disperses weight and reduces cracking.

HydraTrack features a flange that extends up the wall, acting as a built-in diverter. This flange helps direct water down from the weep holes into the pipe and away from the foundation.

HydraTrack comes in 8-foot lengths and has a variety of fittings.

CATALOG #	BOX QTY	DESCRIPTION
HTRACK96	168	Pipe, 8' length
HTCONNECTOR	80	Connector
HTCORNER90OUT	16	90° Outside Corner
HTCORNER90IN	16	90° Inside Corner
